Chuk Son to Tucson: Exploring 4000 Years of Human Experience in the Tucson Basin through the Digital Humanities

Douglas W. Gann - Center for Desert Archaeology

Abstract

The past few years of archaeological research in the Tucson Basin have revealed unexpected trends about the nature of human habitation in the region. From the San Agustin Mission to Early Agricultural Period deposits, the history of the area has been characterized by a rich tapestry of human activity, from prehistoric to modern times. This research has shed new light on the cultural and biological diversity of the region, and has provided insights into the development of human societies in the area.

Project Background

While the study was focused on the Early Agricultural Period deposits in the Tucson Basin, the research has also provided valuable information about the history of human habitation in the region. From the San Agustin Mission to Early Agricultural Period deposits, the history of the area has been characterized by a rich tapestry of human activity, from prehistoric to modern times. This research has shed new light on the cultural and biological diversity of the region, and has provided insights into the development of human societies in the area.

San Agustin Mission & Early Agricultural Period Deposits

The San Agustin Mission was a Spanish mission established in 1797, and it served as a center of religious and cultural activity for the indigenous people of the region. The Early Agricultural Period deposits in the Tucson Basin have provided valuable information about the early development of agriculture in the area, and have shed new light on the cultural and biological diversity of the region.

The Tucson Presidio and Holoholou Houses

While the study was focused on the Early Agricultural Period deposits in the Tucson Basin, the research has also provided valuable information about the history of human habitation in the region. From the San Agustin Mission to Early Agricultural Period deposits, the history of the area has been characterized by a rich tapestry of human activity, from prehistoric to modern times. This research has shed new light on the cultural and biological diversity of the region, and has provided insights into the development of human societies in the area.

Reconsidering Physical Reconstructions

While the study was focused on the Early Agricultural Period deposits in the Tucson Basin, the research has also provided valuable information about the history of human habitation in the region. From the San Agustin Mission to Early Agricultural Period deposits, the history of the area has been characterized by a rich tapestry of human activity, from prehistoric to modern times. This research has shed new light on the cultural and biological diversity of the region, and has provided insights into the development of human societies in the area.

The mission and the mission buildings were intentionally designed to allow the time to be better seen in order that the living of the people may be seen. This was done in order to provide a better understanding of the time period and how it relates to modern times.
